# Software Defect Triage & Severity Classification Report

System Safety, EHS, Permit to Work (PTW) & Incident Management Module | Evaluated: 20 Defect Items

| P0 — Critical Blocker (6 Issues) | P1 — Major Functional Defect (8 Issues) | P2 — Minor & UI Friction (6 Issues) |
|---|---|---|
| Breaks regulatory compliance, core safety LOTO, onboarding access, or incident creation. | Workflow stalls, broken approval routing, evidence view failures, and missing navigation controls. | Dropdown refresh delay, double-click glitches, profile photos, copy button, and download clarification. |

## 1. Priority 0 (P0) — Critical Blockers & Safety / Compliance Violations

*Definition: System-critical failures that halt essential business operations, block core safety isolations (LOTO), prevent incident logging, or directly breach Segregation of Duties. Requires immediate emergency hotfix.*

| # | Module | Defect Description | Severity & Impact Rationale | Pri |
|---|---|---|---|---|
| 1 | **Request Access** | Request Access cannot be submitted. Warning shows: 'We couldn't reach the server. Check your connection and send the form again.' | Network/Backend unreachable or API failure block all new user registration and onboarding. | **P0** |
| 2 | **LOTO** | File/evidence cannot be uploaded in the Lockout/Tagout field. | Critical OSHA/EHS Safety hazard: Isolations cannot be documented before hazardous work begins. | **P0** |
| 5 | **Incident Management** | Chat Admin cannot report an incident. Warning shows: 'Validation failed, UUID expired.' | Critical failure: Direct prevention of incident and near-miss reporting due to token/session expiry. | **P0** |
| 6 | **Permit Permissions** | Org Admin can perform multiple permit actions—fill permit details, submit, approve, and start work. | Segregation of Duties (SoD) violation: Single actor bypasses review, audit, and safety oversight. | **P0** |
| 8 | **Permit Creation – LOTO** | Add Lockout/Tagout is not working while creating a permit. | Safety failure: Cannot attach required LOTO isolation certificates during permit preparation. | **P0** |
| 9 | **Permit Closure – Evidence** | After adding evidence during permit closure, 'Authentication required' is displayed. | Session error prevents permit sign-off and closure, leaving work active or uncertified. | **P0** |

## 2. Priority 1 (P1) — Major Functional Deficiencies & Blocked Workflows

*Definition: High-impact functional defects where key features fail (evidence viewing, CAPA assignment, template authoring, approval notifications) without an intuitive workaround. Must be addressed in current release cycle.*

| # | Module | Defect Description | Severity & Impact Rationale | Pri |
|---|---|---|---|---|
| 3 | **Permit Templates** | Add Section is not working when creating/editing a permit template. | Prevents Safety Administrators from customizing and releasing compliant new permit forms. | **P1** |
| 7 | **Notifications** | Permit approval notification appears in Messages, but clicking it does not open the specific permit; it opens/shows all permits. | Deep-linking route broken; delays urgent review times when multiple permits exist in inbox. | **P1** |
| 11 | **Evidence** | Uploaded evidence cannot be opened/viewed. | Approvers cannot verify site photos, isolation locks, or safety evidence before authorizing work. | **P1** |
| 12 | **HOD Notification** | HOD does not receive a notification when the Job Issuer submits a permit and HOD approval is the next step. | Communication breakdown stalls approval chain; operational downtime on plant floor. | **P1** |
| 15 | **Incident – Root Cause** | Clicking Record Root Cause for an unsafe incident does not open the expected popup/form. | EHS investigation workflow blocked; incidents cannot progress to root cause analysis phase. | **P1** |
| 16 | **Incident – Corrective Action** | Clicking Corrective Action does not open the expected popup/form. | Remediation lifecycle blocked; corrective actions (CAPA) cannot be logged or assigned. | **P1** |

| | | | | |
|---|---|---|---|---|
| 17 | **Incident – Assign** | In Manager Incidents, clicking Assign results in 'Unable to load page.' | Route 404 or unhandled crash when allocating incident investigations to responsible managers. | **P1** |
| 18 | **Permit Creation – Back** | There is no Back button while creating a permit. | Multi-step wizard lacks backward navigation; users risk losing unsaved form data or abandoning flow. | **P1** |

## 3. Priority 2 (P2) — Minor Bugs, UI Inconsistencies & UX Friction

*Definition: Low severity defects with available workarounds, cosmetic discrepancies, click timing delays, or requirement clarifications. Scheduled for subsequent sprint cycles.*

| # | Module | Defect Description | Severity & Impact Rationale | Pri |
|---|---|---|---|---|
| 4 | **Permit Creation** | Machinery does not appear in the dropdown initially. It appears only after refreshing the application. | Workaround exists via page refresh; caused by asynchronous cache/fetch lifecycle hook. | **P2** |
| 10 | **Profile** | Profile picture cannot be removed, and the selected profile picture does not display. | Cosmetic profile preference defect with no direct impact on plant safety operations. | **P2** |
| 13 | **User & Roles** | Temporary Password – Copy button is not working. | Minor friction: Admins can manually select and copy text via keyboard shortcuts. | **P2** |
| 14 | **Download** | A Download option is required/available for downloading the details, but its expected behavior should be verified. | Requirement clarification / UX enhancement for standardizing export formats (PDF/Excel). | **P2** |
| 19 | **Permit Page – Back** | The Permit page does not have a Back button. | Browser back button serves as fallback; dedicated in-app breadcrumb navigation recommended. | **P2** |
| 20 | **Permit Creation – Next** | After entering Basic Information, the Next button does not respond on the first click. The user has to click it again. | Debounce or asynchronous form-state validation lag causes double-click requirement. | **P2** |

### Recommended Remediation Timeline & SLA

| Level | SLA Target | Action Items |
|---|---|---|
| **P0 Critical** | < 24 Hours | Investigate API gateway/auth tokens, enforce RBAC Permit Approval matrix, unblock LOTO file upload & attachment endpoints. |
| **P1 Major** | 2 - 3 Days | Fix modal triggers for Root Cause/CAPA, restore incident routing, repair deep-links in notifications, add step navigation. |
| **P2 Minor** | Sprint Backlog | Resolve machinery dropdown initial fetch timing, fix clipboard API handler, optimize Next button event listeners. |
